

PATENT SPECIFICATION

409.176

Convention Date (Austria): Aug. 1, 1932.

Application Date (in United Kingdom): July 28, 1933. No. 21,282 / 33.

Complete Accepted: April 26, 1934.

COMPLETE SPECIFICATION.

A Device for Cutting Paper or the like with an Irregularly Serrated Cut.

I, WALTER MAGER, of 29, Grundsteingasse, Vienna, XVI, Austria, a Citizen of the Republic of Austria, do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement:—

This invention relates to devices for cutting paper or the like with an irregularly serrated cut, such devices being more particularly suitable for the simple imitation of the edge peculiar to hand-made paper on photographic prints and other sheets of paper. It is known to provide rotary cutting wheels with irregularly waved circumferential edges for the purposes set forth but the present invention consists in the provision of a hand tool in which a cutting wheel of this known kind is mounted in a bifurcated carrier fixed in a handle, in order to permit of a cut being made on any desired curve.

The improved device according to the invention is shown, by way of example, in the accompanying drawings, in which:—

Fig. 1 shows the device in elevation and part section.

Fig. 2 shows the device in side elevation.

Fig. 3 shows the cutting wheel, as seen from the edge.

The cutting wheel *a* consists of a disc having an irregularly waved or crimped edge *e*, which lies on a cylindrical surface. The wheel *a* is rotatably mounted on a pin *d* between the two limbs of a bifurcated carrier *b* which is fixed in a handle *c*.

The cuts are made by traversing the cutting wheel, with the necessary pressure, over the paper or other matter to be cut, guiding the same either free hand, or along a ruler, or by means of a stencil or template.

Having now particularly described and ascertained the nature of my said invention and in what manner the same is to be performed, I declare that what I claim is:—

1. A hand tool in which a cutting wheel of the kind and for the purposes set forth is mounted in a bifurcated carrier fixed in a handle, in order to permit of a cut being made on any desired curve.

2. A device for cutting paper and the like with an irregularly serrated cut constructed as a hand tool substantially as described with reference to and as illustrated in the figures of the accompanying sheet of drawings.

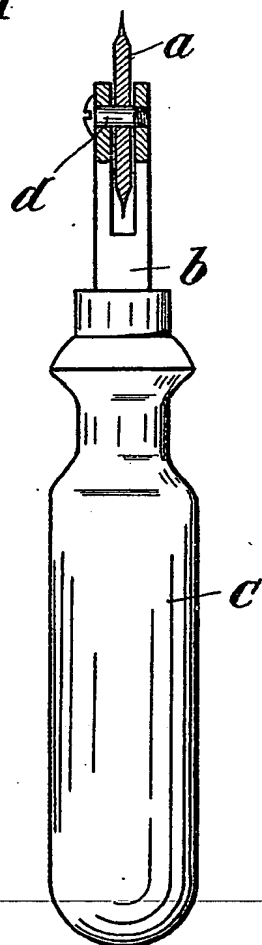

Dated this 28th day of July, 1933.
